Re: Patent Application Control Number 10/825,166

Subject: Reply to S. F. Ganett notice of non-compliance mailed 3/22/2005

Attn: S.F. Ganett

Hello S. F. Ganett:

Attached is my endeavor to provide proper status identification in accordance with your report of March 22, 2005. I trust this is correct; if not, please holler.

May I ask you a question? As we move into production of this device, we are finding some things work better and changes in the claims or write up of the preferred embodiments could be made which more closely represent the optimum device. For example: 1) the spacing of the hold down means looks best at six feet plus or minus one foot. 2) We really need the rebar in the glue/sand rib for added rigidity at installation. 3) The width of the sheet is more appropriately ten feet rather than twelve feet. These all seem like small potatoes but if I could easily incorporate them in the claims, I would do so. What do you recommend?

Thank you:

Warren Grosjean
